FOR HEALTHIER, HIGH-PERFORMANCE TURF

MODE OF USE

PURE GEL 15-15-15 through its combination and special blend of highly concentrated macro and minor nutrient elements, is specially formulated with a 'GEL' adjuvant creating greater efficiency for both foliar and root absorption to deliver essential nutrients effectively. This positive chemistry makes the product very effective in tank mixed applications with other nutrient and plant protectant products, and it allows for great foliar or soil dispersion.

TURFGRASS APPLICATION:

Foliar:
Apply as a foliar application at a rate of 15–20 L/Ha (4.7 to 6.3 oz/M) and allow to dry on the leaves before irrigation or other subsequent applications.

Carrier rate:
200–400 L/Ha (21 – 43 gal/A) with well dispersed droplets for full foliar coverage.

Rootzone Application:
Apply at 15–20 L/Ha (4.7 to 6.3 oz/M) and follow immediately with enough irrigation to penetrate evenly to 6 cm (2.36") depth.
Be careful not to overwater.

Interval:
Apply every 10 – 14 days for best results. If adjusting to tighter intervals, reduce application rate accordingly. Longer intervals can diminish the full effect of foliar activity on new young leaves that are constantly being regenerated otherwise.

PRECAUTIONS

The user assumes all risks associated with handling and application. Store in original packaging in cool, dry conditions out of direct sunlight.
